São Paulo, Brazil (UTC-3) · Open to remote roles worldwide

SUMMARY

Senior iOS Engineer with 12 years shipping native apps and platform features for products serving hundreds of millions of users — across fintech (PayPal, Itaucard), automotive (Volkswagen), and food delivery (HelloFresh). Specialized in Swift, SwiftUI, and modern concurrency, with a track record of modernizing large codebases, driving cross-team integrations, and shipping end-to-end products. Independently built and shipped live iOS, Android, and web apps (17K+ downloads). Seven years in distributed, English-speaking international teams in Germany.

EXPERIENCE

Senior iOS Engineer — PayPal (via Taller)

Remote · Mar 2026 – Present

- Shipped 8+ consumer package-tracking capabilities — edit, mark-delivered, Amazon integration, carrier suggestions, manual tracking, and account-error flows — in PayPal's modular SwiftUI app (400M+ accounts), released safely behind feature flags.
- Built features on a GraphQL-backed MVI architecture with clean repository/domain layers, full VoiceOver accessibility, analytics, and unit + snapshot test coverage.
- Drove AI-assisted development workflows with Claude Code and MCP integrations across Jira, GitHub, Figma, Datadog, Harness, and SonarQube — accelerating exploration, implementation, code review, and quality checks.

Senior iOS Engineer — Volkswagen

Berlin, Germany · Mar 2020 – Aug 2025

- Core contributor (575 merged PRs) to Volkswagen's flagship connected-car app — millions of users across 40+ markets in Europe and Japan, spanning multiple Group brands.
- Extended the app across the Apple ecosystem — Live Activities for EV charging (Lock Screen / Dynamic Island), Home Screen and Lock Screen widgets (WidgetKit), and the Apple Watch app.
- Prototyped a visionOS / Apple Vision Pro experience and was invited to a hands-on workshop at Apple's Munich office.
- Partnered with multiple VW Group teams to integrate their white-label features into the brand app — co-defining the public APIs and integration contracts for 4–5 features, including a digital car key in Apple Wallet.
- Helped the iOS app sustain the highest App Store rating among all VW Group brand apps, ahead of Audi, Porsche, and Škoda.
- Modernized the codebase by migrating 20+ screens to SwiftUI, Combine, and async/await — speeding feature delivery and cutting maintenance — while sustaining 99.8% crash-free sessions and mentoring engineers through code reviews and 20+ technical interviews.

Senior iOS Developer — HelloFresh

Berlin, Germany · May 2018 – Feb 2020

- Built and maintained core customer-facing features for a global meal-kit app with millions of active users.
- Designed and ran numerous concurrent A/B experiments, informing data-driven decisions that improved retention and conversion.
- Led an MVVM-C refactor with dependency injection that brought business logic (view models) to 100% unit-test coverage.
- Led a code-cleanup initiative that removed 30+ rolled-out A/B variations (~10k+ lines), earning team recognition for driving codebase hygiene.

iOS Developer — CI&T

Campinas, Brazil · Jul 2016 – Apr 2018

- Rebuilt Itaucard (4M+ users), Itaú's credit-card app, from Objective-C to Swift — improving performance, security, and accessibility.
- Stood up automated testing pipelines with Calabash, Cucumber, and XCTest.

iOS Developer — Mosyle

Campinas, Brazil · Jan 2014 – Jun 2016

- Built education and device-management (MDM) features: drawing tools, chat, document viewers, and cloud sync.
- Shipped a production app with image editing, push notifications, and PayPal integration; owned the full App Store release lifecycle.

PROJECTS

- **Bíblia e Hinário CCB** — built and continue to maintain a cross-platform iOS + Android app (SwiftUI + Kotlin/Compose) for a Brazilian faith community: **17K+ downloads**, with text-to-speech, offline reading, a church-locator map, multi-language localization, and a remote-config content system.
- **Public-domain reader apps** — designed, built, and launched a portfolio of classic-reader apps on the App Store on a shared, remotely-configured architecture supporting 7 languages.
- **Big Feirão (car-fair platform)** — designed, built, and shipped a production Next.js / TypeScript site with an AI chat assistant; drove **3,000+ visitors** and generated **400+ WhatsApp leads** for dealerships in two weeks.

SKILLS

iOS: Swift, SwiftUI, UIKit, Combine, Swift Concurrency (async/await), visionOS (prototyping), XCTest, XCUITest, Snapshot Testing

Android: Kotlin, Jetpack Compose — shipped a production app to Google Play (2026)

Architecture: MVI, MVVM, MVVM-C, modular architecture, dependency injection, repository/domain layers, remote config

APIs & Tooling: GraphQL, REST, GitHub Actions, Fastlane, Tuist, feature flags, analytics, accessibility (VoiceOver)

Web: Next.js, TypeScript, Vercel

AI-Assisted Development: Claude Code (MCP tool integrations), Codex — roadmap-driven delivery, spec-to-implementation, code review, test generation

Leadership: technical documentation, delivery planning, code review, mentoring, cross-functional coordination

EDUCATION

B.Sc. in Computer Engineering

2009 – 2013

Pontifícia Universidade Católica de Campinas
